AMARI Test SIM Cards

Overview

Amarisoft SIM card is a 3GPP compliant SIM/USIM card. It is intended to simplify testing of devices with Amarisoft Callbox series and to reduce the test setup. The data inside the card matches the default settings of Amarisoft Core Network. As a result, any device using this SIM card can register to Amarisoft network without changing any configuration parameter.

Technical Specification	
Applications	SIM/USIM
HPLMN	00101
IMSI	001010123456789
Authentication Algorithm	XOR
Authentication Key	00112233445566778899aabbccddeeff
Programmable	Yes, any file (EF) except for ICCID, change of authentication algorithm and key
Supported authentication algorithms	XOR, MILENAGE, TUAk
PIN1/PIN2	1234 (Disabled by default)
PUK1/PUK2	12345678
ADM1/ADM2 (Admin)	11111111

Physical Specification

Plastic package

half size 43x54mm

Form factor

1FF (standard) with 2FF (mini), 3FF (micro) and 4FF (nano) support

Temperature Range

-25 to +85 Centigrade chip temperature

AMARI Test eSIM Profile

Overview

Amarisoft eSIM is a GSMA certified eSIM that can be used with any eSIM capable commercial device. It is intended to simplify testing of devices with Amarisoft Callbox series and to reduce the test setup. The data inside the card matches the default settings of Amarisoft Core Network. As a result, any device using this SIM card can register to Amarisoft network without changing any configuration parameter.

Technical Specification	
Applications	SIM/USIM
HPLMN	00101
IMSI	001010123456789
Authentication Algorithm	XOR
Authentication Key	00112233445566778899aabbccddeeff
Programmable	No
Supported authentication algorithms	XOR, MILENAGE, TUAk
PIN1/PIN2	1234 (Disabled by default)
PUK1/PUK2	12345678
ADM1/ADM2 (Admin)	11111111

End to end device testing

Specific feature device testing

4G 5G network element testing

Private network

Operator conformance testing

FTW gateway testing
